33 Energy Flow In Ecosystems - Teacher Worksheets

In most ecosystems, the sun is the source of energy that producers use to create energy.

But in a few rare cases—such as ecosystems found in rocks deep beneath the ground—bacterial producers can use the energy found in a gas called hydrogen sulfide, that is found

in an Ecosystem

In ecology, energy flow, also called the calorific flow, refers to the flow of energy through a food chain, and is the focus of study in ecological energetics. In an ecosystem, ecologists seek to quantify the relative importance of different component species and feeding relationships.
