The tutorial demonstrates different ways to combine sheets in Excel depending on what result you are after – consolidate data from multiple worksheets, combine several sheets by copying their data, or merge two Excel spreadsheets into one by the key column.

Consolidate in Excel: Merge multiple sheets into one
How to create dynamic named range in Excel? Normally, Named Ranges are very useful for Excel users, you can define a series of values in a column, give that column a name, and then you can refer to that range by name instead of its cell references. But most time, you need to add new data to expand the data values of your referred range in future.

How to create dynamic named range in Excel?
However, those options are not stored with the sheet (they are stored somewhere in the registry and change with each sheet or workbook you open or set), so if you open another workbook without those settings and then open a workbook with the timestamp and setting, those settings will have disappeared.

How to insert timestamps in excel sheet using formulas
