Kawasaki's DFI (Digital Fuel Injection) system used on the 750 Turbo is based upon that of the GPz1100. The DFI system computes the optimum fuel injection quantity according to the program stored in the memory of the con-trol unit and information collected by various sensors which detect engine oper-ating conditions.

Read the MegaManual, it will tell you everything you need to know about EFI, and then you can decide if you really want to go EFI. Not easy, but well worth it IMHO. Using any 750 Turbo parts (the only fuel injected GPz750) other than the throttle bodies is a bad idea, the stuff is 29-30 years old.

## **fuel injection conversion - KZRider Forum - KZRider, KZ ...**

For the 750-turbo, Kawasaki developed a digital fuel-injection system. Minor adjustments were made continuously, via various sensors, producing a smooth and responsive power curve. Stored trouble codes indicating malfunctions could be recalled by a technician. Stock performance of this bike was on a par with the GPz-1100.

To get an idea of what the Turbo Wars netted, we pitted Kawasaki's ZX750E1 (also commonly referred to as the GPz Turbo) against Yamaha's XJ650LJ Seca. Kawasaki had delivered — albeit unofficially — the Z1-RTC in the latter part of the 1970s, but the ZX750 turbo was a true production unit and therefore better suited for this standoff.

Sporting a Hitachi HT-10B turbocharger positioned close to the headers and utilizing digital fuel injection the GPz Turbo was comparatively (turbo-ly speaking) simple in design. The GPz750 engine on which it was based needed only minor strengthening to handle the Turbo's 95 horses.

## **TMIOA - 1984-85 Kawasaki ZX750E1/2 Turbos**

And no, a TPS from an old fuel-injected GPz1100 won't work on your 750 Turbo. Manifolds (the rubber boots that hold the fuel injector bodies to the cylinder head) are prone to cracking (especially on the non-visible side that mates to the cylinder head) and leaking. A telltale sign is a mist of fuel around the area of the manifolds.
