Physics: Watch Out for the Logs? As a logging truck rounds a bend in the road, some logs come loose and begin to roll without slipping down the mountainside. The mountain slopes upward at 48.0 degrees above the horizontal, and we can model the logs as solid uniform cylinders of mass 575kg and diameter 1.20m.

Figure 4: Initial well log sets frequently do not have the complete set of logs needed for a full petrophysical and rock physics analysis. Some logs can have problems such as the cycle-skipping in the sonic log. Following the integrated petrophysics and rock physics work, PowerLog can display the full set of edited and synthesized log data.

another stupid mastering physics problem Astronomers have observed a small, massive object at the center of our Milky Way galaxy. A ring of material orbits this massive object; the ring has a diameter of about 14 light years and an orbital speed of about 150 km/s. I tried $v^2/r = Gm/r^2$ solved for $m = 2.2 * 10^{34}$ kg which is wrong I used $r = 7$ light year = $7(9.461 * 10^{15}$ m) and used $v = 1.5$...

Mastering is the very last stage of the audio production process and something that should only be done once for any given piece of music: remasters are almost always done to pick clarity and detail out of old recordings that were made on tape with less than cutting-edge outboard.
