Answer: B. In longitudinal waves, particles of the medium vibrate to and from in a direction parallel to the direction of energy transport. If the particles only moved north and not back south, then the particles would be permanently displaced from their rest position; this is not wavelike.

Waves Review - Answers - Physics

As discussed in Unit 10 of The Physics Classroom Tutorial, electromagnetic waves are waves that are capable of traveling through a vacuum. Unlike mechanical waves that require a medium in order to transport their energy, electromagnetic waves are capable of transporting energy through the vacuum of outer space. Electromagnetic waves are produced by a vibrating electric charge and as such, they consist of both an electric and a magnetic component.

displacement. For instance, if a physics teacher starts on one corner of a table and walks all around the table and back to the starting point, then her displacement is zero. She is not out of place. 6. Suppose that you run for 10 seconds along three different paths. Rank the three paths from the lowest average speed to the greatest average speed.

Describing Motion Verbally with Distance and Displacement

Inertia is the resistance of an object to changes in its position or state of motion. When an object is at rest, it resists changes that would cause the object to move. When an object is in motion, it resists changes that would cause the object to stop. □ Objects will only accelerate in the same direction of movement.
